44 (\* Weight is intended without oil.

## POWER-ASSISTED INBOARD STEERING SYSTEMS

The Twin Disc Power Assisted Steering system is the combination of innovation, reliability and comfort. The system provides prompt responsiveness and total control with just 3.5 wheel turns lock-to-lock, even at high speeds (over 28 Knots). The compact design and reduced number of components (3 vs 6-7 in other brands) allows the system to be easy to install and service.

Twin Disc power-assisted steering assures maximum comfort, minimum effort, total efficiency in any sea condition.

### The System

The hydraulic helm pump is available in all displacements and mounting configurations (see help pump on page 9 for the model selection). Simple design with reduced dimensions for the steering cylinder, which are available either in anodized aluminum body (for applications up to 45°), or in a brass body for heavier applications, has the servo cylinder mounted directly to the main cylinder.

The Twin Disc power-assisted steering is completely independent from the vessel's main engines and all necessary power is provided by a single electrohydraulic power unit.

The system has all the necessary valves for the servo system in order to ensure safe steering (non-return valves, relief valves, etc.). It also includes an interface for the autopilot and a special device for the system automatic filling.

In order to ensure safety and total boat control in emergency conditions, the Twin Disc steering system automatically turns into a manual system if there is any problem with the unit.

### Features

- Totally independent from the vessel propulsion system
- Effortless navigation comfort in any condition
- High quality, safety and reliability
- Innovative concept and working principle
- 3 elements of the basic system vs. 6-7 elements in other brands
- Strong reduction of installation time (over 30% in comparison with competitors steering)
- Prompt responsiveness and total control in just 3.5 turns lock-to-lock (this number can be varied)
- Cooling system is not necessary
- Supplied with interface for the autopilot
- Special device for automatic filling of the system
- Bleeding procedure easy and fast
- Steering helm pump available in 5 displacements and 4 mounting configurations
- Provided with automatic manual back-up steering
- Simplified service and repair procedures (the system is not pressurized)
- Limited number of spare parts
- Helm pumps and cylinders meet ABYC standards and are CE approved
- Helm pumps are NMMA Type Approved
